username: nome utente
website: sito web

The Era of Personal Computers

Until the early 1980s, computers were too expensive for personal use. As the cost to manufacture computers components came down, IBM saw an opportunity to make small, self-contained personal computers (PCs) that had their own Central Processing Units (CPUs). Since Unix was designed for giant centralized machines and dumb terminals, there was a need for an operating system that could run on these personal devices. IBM partnered with Microsoft to create an operating system for personal computers. This operating system was called Disk Operating System (DOS). Although DOS wasn't easy to use (users still needed to type commands manually on a line), the idea of owning a computer caught on, and the IBM PC started the PC revolution by becoming the world's first personal computer. Along with inexpensive hardware, in the mid-1980s came user-friendly software. In 1985, Microsoft launched Microsoft Windows, an easy-to-use Graphical User Interface (GUI) based operating system. Microsoft also released Excel for financial calculations in 1985 and Word for text editing in 1989. Doug Klunder (Microsoft's first college hire) led the development of Excel and Charles Simonyi (the world's first repeat space tourist) led the development of Word. Both programs leveraged the special capabilities of graphical user interfaces and propelled personal computers to widespread adoption in businesses. Computers also turned into convenient home devices for everyday users to write letters, manage personal finances, communicate with friends and family, create music, and watch entertainment shows. Between 250 million and 350 million personal computers sell each year to meet this demand.

1. When did personal computers become affordable for individuals?
A) In the 1950s
B) In the early 1980s
C) In the 1990s
D) In the early 2000s

2. What was the main reason computers were not used personally before the 1980s?
A) They were too slow
B) They had no software
C) They were too expensive
D) They had no monitors

3. Which company saw the opportunity to make small personal computers?
A) Microsoft
B) IBM
C) Apple
D) Intel

4. What did these personal computers include that made them self-contained?
A) Printers
B) Central Processing Units (CPUs)
C) Internet access
D) Wireless keyboards

5. Why couldn’t Unix be used on personal computers?
A) It was too expensive
B) It was designed for centralized machines and dumb terminals
C) It had no graphical interface
D) It was created by Microsoft

6. Which company partnered with IBM to develop an operating system for PCs?
A) Intel
B) Apple
C) Microsoft
D) Google

7. What was the name of the operating system created for IBM PCs?
A) Windows
B) Unix
C) Linux
D) Disk Operating System (DOS)

8. How did users interact with DOS?
A) By using a touchscreen
B) By typing commands manually
C) By using a mouse and icons
D) By speaking to the computer

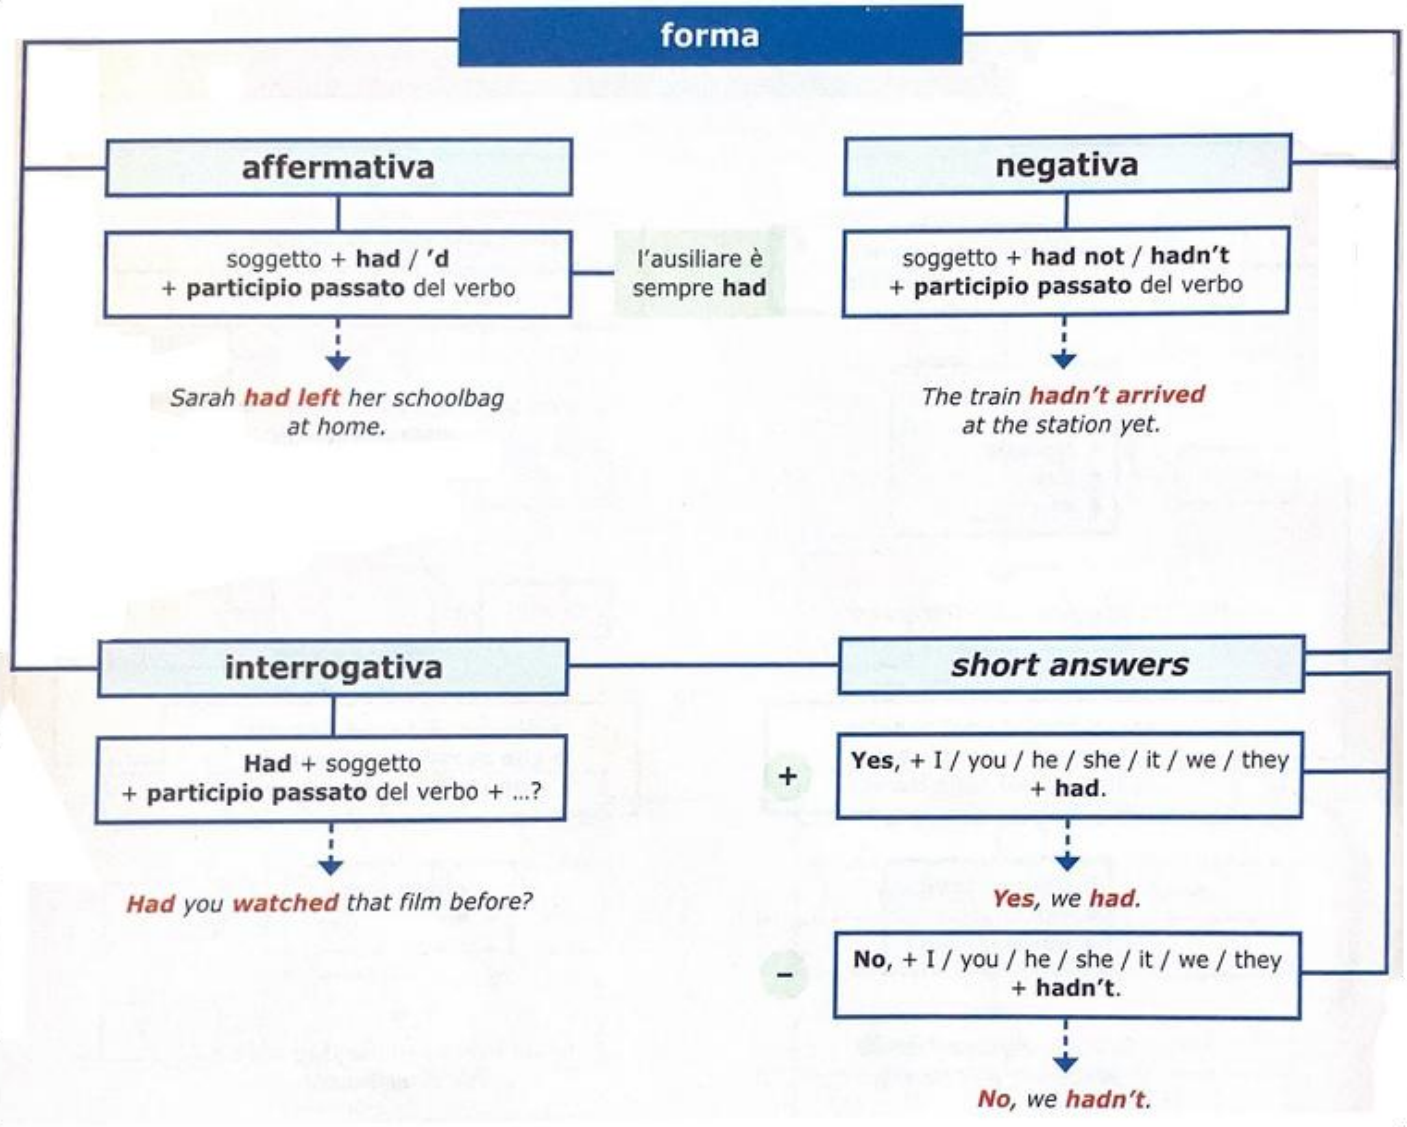

9. What was the problem with DOS according to the text?
A) It was too expensive
B) It was too slow
C) It wasn’t easy to use
D) It had no memory

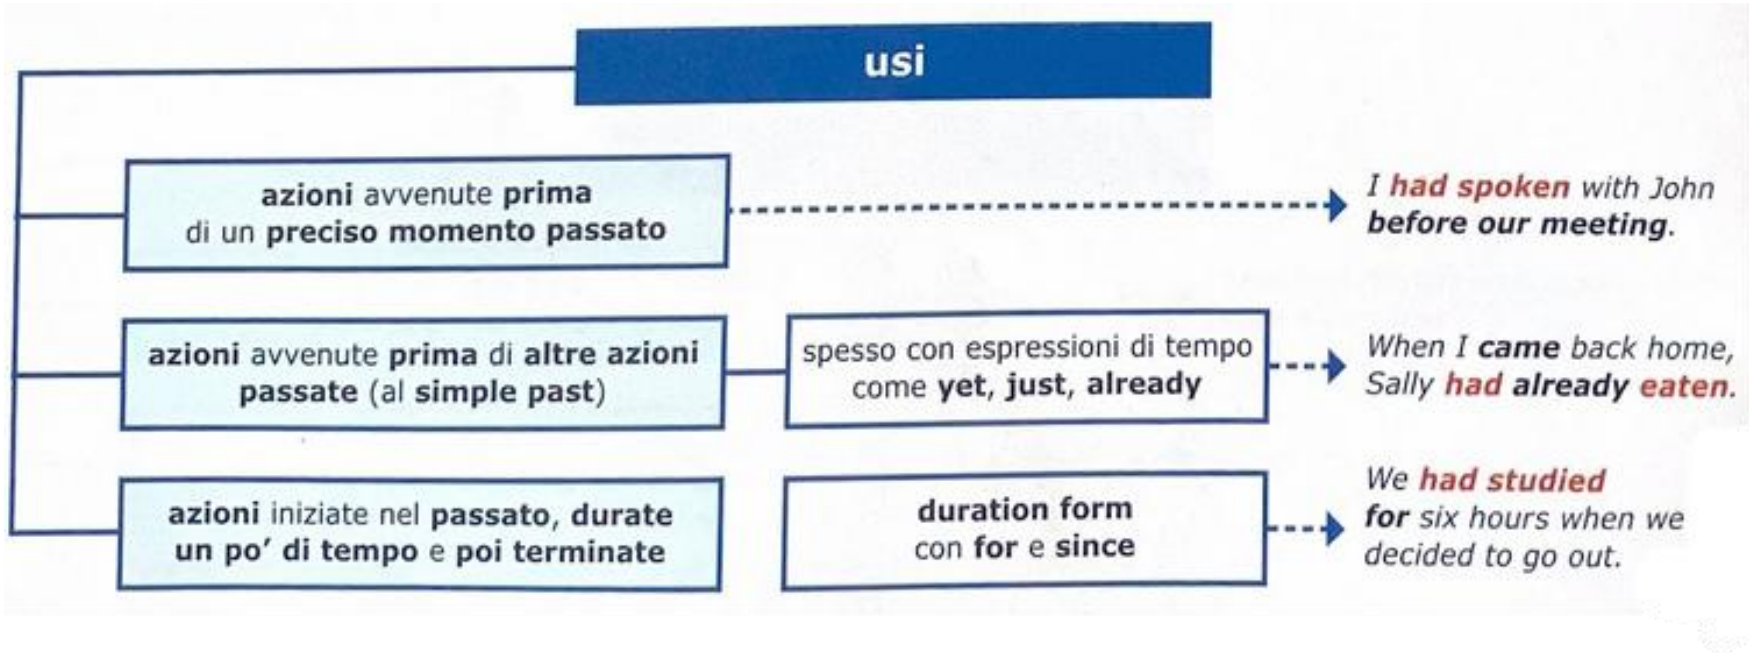

10. What started the “PC revolution”?
A) The release of Windows
B) The invention of the internet
C) The IBM PC becoming the world’s first personal computer
D) The creation of Unix

The IBM PC and Florida

The IBM personal computer was invented in Florida. Boca Raton to be precise. Since 1967, IBM had operated a unit in Boca Raton to develop, build, and sell inexpensive computers. A team at this unit built the inexpensive personal computer (PC) by creating an open design where components from multiple vendors could interoperate. The IBM PC used processors from Intel, operating systems from Microsoft, and components from several other vendors. Competition among these vendors brought costs down, while the popularity of personal computers helped many of these suppliers become large companies themselves. As of 2022, Microsoft (valued at $2Tr) and Intel (valued at $130bn) are worth more than IBM itself ($118bn). As of 2022, IBM, Intel, and Microsoft employ over 600,000 people.

Past perfect simple

usi
azioni avvenute prima di un preciso momento passato
I had spoken with John before our meeting.
azioni avvenute prima di altre azioni passate (al simple past)
spesso con espressioni di tempo come yet, just, already
When I came back home, Sally had already eaten.
azioni iniziate nel passato, durate un po' di tempo e poi terminate
duration form con for e since
We had studied for six hours when we decided to go out.

Completare le frasi con il past perfect simple.

1. The cat ___ (scratch) the sofa.
2. The child ___ (draw) on a wall.
3. The children ___ (break) their toys.
4. She ___ (make) a cake.
5. They ___ (visit) Paris.
6. We ___ (live) in Milan.
7. The student ___ (read) the article.
8. The girl ___ (water) the plants.
